Yes, Kobe Bryant Faked his Death by Miles Mathis

THE STRATEGY OF MISDIRECTION AND NARRATIVE CONTROL

The search for truth in the digital age is often hampered by the intentional promotion of absurd theories designed to discredit any legitimate skepticism. When individuals search for information regarding the death of Kobe Bryant, they are frequently directed toward content that is easily debunked, such as claims that he is now posing as another athlete. This tactic is known as blackwashing, where a grain of truth is buried under a mountain of nonsense so that the average person will dismiss the entire concept of a staged death. If a theory were truly threatening to the official narrative, it would be removed from major platforms immediately. The fact that certain videos remain visible suggests they serve as a form of controlled opposition, possibly even funded by the subjects themselves to protect their actual exit from public life,. By presenting the public with a ludicrous premise, the organizers ensure that the real evidence remains hidden in plain sight, protected by the ridicule of the masses.

TECHNICAL IMPOSSIBILITIES REGARDING FLIGHT DATA RECORDERS

A foundational element of the official story is the claim that the helicopter involved in the crash did not possess a black box or flight data recorder. This detail was used to explain why the investigation was so complex for agencies like the National Transportation Safety Board. However, this claim directly contradicts federal mandates that have been in place for decades. Flight recorders have been a mandatory requirement for all commercial aircraft, including helicopters, since 1967. The aircraft in question was a Sikorsky operated by Island Express, which is a commercial entity. Had this company been operating high-end machinery without the legally required safety equipment in 2020, they would have been shut down by the FAA immediately. The continued existence of the company proves that the narrative of the missing black box is a fabrication intended to mirror other historical events where data conveniently vanished. These devices are specifically engineered to withstand extreme impacts and temperatures exceeding 1,000 degrees Celsius, making their reported absence even more suspicious.

LOGICAL CONTRADICTIONS IN OFFICIAL REPORTING

The official timeline and the data points provided by mainstream outlets contain internal inconsistencies that fail the test of basic logic. Reports initially stated that almost all air traffic was grounded on the morning of the event due to heavy rain and fog. Yet, in the very same breath, the narrative claimed the pilot was forced to circle because there was heavy air traffic in the area,. It is physically impossible to have a congested airspace while the majority of flights are grounded. Furthermore, the control tower reportedly told the pilot he was flying too low to be tracked by radar. This raises a glaring question regarding the source of the data released to the public. If the helicopter was off the radar and lacked a black box, there is no possible way for authorities to know its exact altitude, its speed of 161 knots, or its rapid climb rate,. The media reported precise data points that simply could not have been recorded, suggesting the story was written as a script rather than documented from physical evidence,.

NAVIGATIONAL ANOMALIES AND GEOGRAPHICAL DISCREPANCIES

The reported flight path of the helicopter makes little sense when compared to a map of Southern California. The flight was supposedly traveling from Santa Ana toward Camarillo, yet it reportedly flew over Glendale and Burbank. This route would require the pilot to fly significantly out of his way, taking a large Sikorsky directly over the skyscrapers of downtown Los Angeles. In conditions described as heavy fog, no professional pilot would risk flying near massive structures like the Wilshire Grand or the USBank Tower. Additionally, the pilot was reported to be flying at 1,200 feet in an area where the surrounding terrain reaches 3,300 feet. Because Sikorskys are equipped with their

own internal altimeters, the pilot would have seen his altitude on his own screens and would not have needed a radar operator to warn him of the danger. The suggestion that an experienced pilot would fly at such a suicidal altitude in zero visibility is highly improbable. This indicates that the fog and the flight path may have been narrative tools used to facilitate a disappearance.

PERSISTENCE OF IDENTITY IN PUBLIC DATABASES

One of the most compelling pieces of evidence suggesting the event was staged is the continued appearance of the individuals involved in public record databases. Search engines such as Radaris and Instantcheckmate list the pilot, Ara Zobayan, as a living person residing in Huntington Beach. While the official report states he died at age 50, these databases show him as being 55 or 56 years old. There are no obituaries or listings on sites dedicated to the deceased, such as Findagrave, to confirm his passing. Similarly, verified listings for Gianna Bryant appear in Florida with no listed age or relatives, which is a common characteristic of protected identities. Even searches for Kobe Bryant himself have yielded verified results in areas like Fort Myers, Florida,. While the age listed on some profiles may vary, the existence of these records in systems that update based on active data suggests relocation rather than death.

VISUAL EVIDENCE AND PHYSICAL ANOMALIES AT THE SITE

The physical evidence from the reported crash site does not align with the characteristics of a high-speed aviation disaster. Visual analysis of the debris suggests that the remains shown in photographs do not belong to a Sikorsky helicopter. It is suggested that the organizers of the event would not want to destroy a multimillion-dollar aircraft for a staged retirement. Furthermore, while the impact was said to have started a brush fire, the surrounding vegetation in the photographs shows no signs of scorching or fire damage. Instead of a significant impact site, only a localized puff of smoke is visible, which does not match the aftermath of an aircraft traveling at 160 knots with a full tank of fuel,. These visual discrepancies suggest that the scene was manufactured rather than being the result of a genuine high-speed crash.

SIGNALS AND PREDICTIVE PROGRAMMING

The staging of this event appears to have been planned for nearly a decade. Evidence for this is found in predictive signals, such as a Twitter account that accurately foretold a helicopter crash involving Kobe Bryant as early as 2012. The account used Bryant’s own image, suggesting that the athlete may have been signaling his long-term exit strategy himself. Similar foreshadowing was seen in a 2018 cartoon. Even the final hours of the official narrative were marked by symbolic gestures, such as the report that Bryant and his daughter received the Eucharist together just before the flight. This detail is viewed as a scripted signal within the narrative to provide a heroic and religious tone to his departure. The focus on Bryant and his daughter as a duo in the media and in memorials provided a convenient way for them to exit public life together and secure full privacy on a secluded island.

thank you for listening to another session of the NoteBookLM.news series. You can find the full archive of all my podcasts at NotebookLM.news
